Abstract of JP 2000125801 (A)

PROBLEM TO BE SOLVED: To obtain the subject granule scarcely deferiorating and changing the quality of aromatic ingredients in a Miso, capable of retaining the essential feeling and flavor of the fushis (smoked and dried fish meats) and providing a high-quality Miso containing a soup stock by coating the surface of the tushis with a dried film layer of polymeric polysaccharides capable of forming a get at the time of absorbing water, SOLUTION: This granule of fishis is obtained by coating the surface of the fushis such as a dried bonito with a dried film layer of polymeric polysacchrides capable of forming a get at the time of absorbing water such Tas a mixing for one or mixer Kinds Selected from Tiles group of carrageeran, agar, gellan gum, pectic acid and calcium slighate. Furthermore, the dried film layer of perfectively contains the mixture of one or more kinds selected from the group of glycard, matitiol, sorbiot, a monoplycarde and gelatin and an interlayer film layer of oils and faits and/or water or zein having 40-90 deg. C melling point is preferably processin between the fusies and the dried film layer of the polymeric polysaccharides. The weight ratio of the fushis to the dried film layer is preferably (002-60).
